Changelog for FireMonkey: v2.0.0: Library provides support for FireMonkey. v2.0.0: The FireMonkey support module is now available. Description: FireMonkey is a powerful multi-platform GUI application framework for creating desktop and mobile applications. The developer can use the framework in any programming language to create easy-to-use applications for mobile, desktop and web platforms. It offers Windows, OSX, iOS, Android and Linux support. FireMonkey supports the following languages: C#, VB.NET, Delphi, C++Builder and FPC. Dedicated chartset detector: Since the ID3v2 Library has been designed to be independent from the DLLs and associated utilities, it provides a dedicated chartset detector that will automatically detect, and display in the tags, the tags found in the audio file. It does so by checking the structure of the ID3v2.4.0 header found in the file. It will detect those metadata tags based on the presence of the following sequences in the file: ID3v2 Music Genre Codes ID3v2 Music Genre Codes (example

What's New in the ID3v2 Library?

Cross platform tool for editing ID3v2/Lyrics3/ID3v2.3/ID3v2.4 tags from C++ and Delphi. ID3v2 Library allows you to edit ID3v2 tags from C++ and Delphi. It supports ID3v1, Lyrics3v2, ID3v2.3 and ID3v2.4 tags and allows you to set the title, artist, album, year, genre, URL, lyrics language ID and description, as well as comments. Besides Windows, the utility is compatible with OSX, iOS, Android and Linux software. There are two files available for download: installer and portable. In the second case, the downloaded package can be simply unzipped to reach the core files immediately, without having to undergo a setup procedure. Distinct tags can be specified in ID3v1 and IDE3v2 mode. For ID3v2, you can set the title, artist, album, year, genre, URL, lyrics language ID and description, as well as comments. If the audio track already has tags, these can be loaded to edit or completely remove them. It's also possible to add album covers using local image files, as well as to compress and decompress frames. Settings can be configured for desynchronized tags, extended header, experimental mode and CRC too. ID3v1 tags are only responsible for the title, artist, album, year, comment, genre, and track number.
